DevOps Classroomnotes 14/May/2023

Metric Beats to Capture Metrics

- enable nginx metrics
 - navigate to /etc/metricbeat/modules.d and rename nginx.yml.disabled to nginx.yml
 - copy the dashboards into bin sudo cp -r /usr/share/metricbeat/kibana/ /usr/share/metricbeat/bin
 - Now start the metric beat after setting in metricbeat.yml
 - cloud.id
 - cloud.auth
 - kibana url
- We have configured all dashboards
 - System Overview:

- Apache Dashboard
