Azure DevOps Pipelines Workshop – Part 1

- Lets write a pipeline for a project [Refer Here](#)

```
---
pool:
  name: 'Azure Pipelines'
  vmImage: ubuntu-18.04

trigger:
  - master

steps:
  - task: Maven@3
    inputs:
      mavenPOMFile: 'pom.xml'
      goals: 'package'
      publishJUnitResults: yes
      testResultsFiles: '**/surefire-reports/TEST-*.xml'
      jdkVersionOption: '1.8'
```

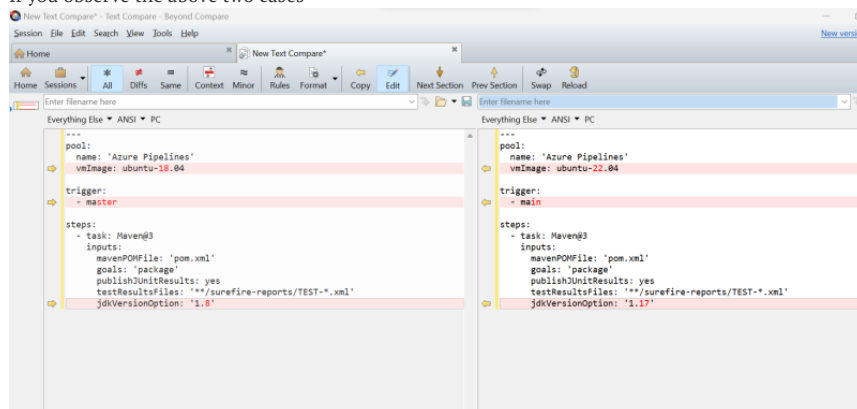

- A pipeline for spring petclinic on main branch [Refer Here](#)

```
---
pool:
  name: 'Azure Pipelines'
  vmImage: ubuntu-22.04

trigger:
  - main

steps:
  - task: Maven@3
    inputs:
      mavenPOMFile: 'pom.xml'
      goals: 'package'
      publishJUnitResults: yes
      testResultsFiles: '**/surefire-reports/TEST-*.xml'
      jdkVersionOption: '1.17'
```

- If you observe the above two cases

- Azure DevOps allows us to reuse using templates

Azure Pipeline Templates

- [Refer Here](#) for official docs
- We have created our first reusable template in templates folder [Refer Here](#) for changes
- Now lets create a reusable steps and use it in template at step level. [Refer Here](#) for the changes done
- Lets create a repository for reusable Templates. [Refer Here](#) for sample repository
- [Refer Here](#) for the usage of GitHub Repository to get the Reusable Templates
