Metrics, Logs and Traces

- [Refer Here](#) for detailed info on logs vs metrics vs traces
- Metrics: Metrics are numeric time-series data.
- Logs :
 - Logs are text informations with no standard way/format.
 - Logs from different applications/servers
 - Apache 192.168.2.20 - - [28/Jul/2006:10:27:10 -0300] "GET /cgi-bin/try/ HTTP/1.0" 200 3395
 - [Refer Here](#) for some other applications
 - For logs we deal with text (unstructured data)
 - using logs requires a solution to
 - convert unstructured text in semi structured
 - understand logs with various format
 - Log analysis solution
- Traces:
 - APM (Application Performance Monitoring) Agents can help
- We are trying to make our applications observable
- Monitoring tells you when something is wrong, while observability enables you to understand why.
- Tools
