- dotnet build command [Refer Here](#)

```
git clone https://github.com/nopSolutions/nopCommerce.git
# dotnet-sdk 6.0
dotnet build <path to sln>
```

- install dotnet sdk 7

```
sudo apt-get update && \
sudo apt-get install -y dotnet-sdk-7.0
```

- To build the project

```
git clone https://github.com/nopSolutions/nopCommerce.git
cd nopCommerce
dotnet restore src/NopCommerce.sln
dotnet build src/NopCommerce.sln
```

- Pipeline created is

```
---
pool:
  name: "Azure Pipelines"
  vmImage: ubuntu-22.04

trigger:
- master

steps:
- task: DotNetCoreCLI@2
  inputs:
    command: build
    projects: src/NopCommerce.sln
```

Terms

- Dependency: The library or framework which your application is relying on for some functionality
- Resolving Dependencies: Every Dependency will have some version
