DevOps Classroomnotes 03/May/2023

What has to be monitored?

- There are organizations and individuals who have published the best practices on implementing a monitoring solution
    - Google Four Golden signals Refer Here
   - USE method Refer Here
    - RED method Refer Here

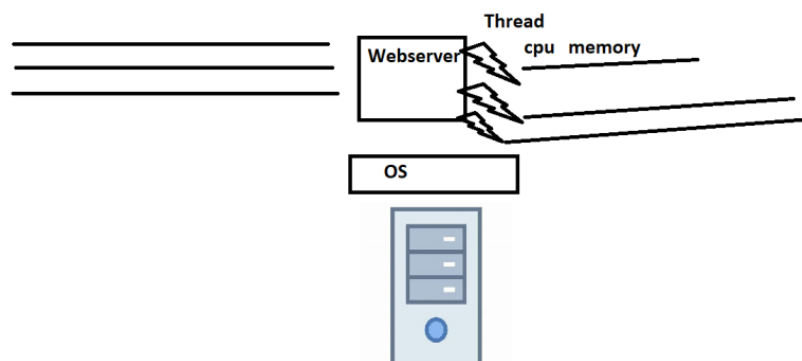

Terms in Monitoring

- Latency
- Traffic
- Errors
- Saturation

Some basic Stuff

- Impact of CPU, Memory and DISK on your applicaions

- Webserver: When requests are sent, threads are created which will have its own cpu and memory share. So as number of requests increase the load on cpu and memory increases.

- Generally, to figure out the saturation points, organizations stress/load the systems with the help of performance test engineers
